

Amendments to the Specification:

Please amend the paragraph beginning on page 3, at line 26 as shown below:

The advantages associated with the present invention are numerous. For instance, the present invention allows a vehicle operator to pre-select destinations and then obtain the driving directions for a desired pre-selected destination by simply pushing a button associated with the desired pre-selected destination instead of entering the address of the desired destination. Further, the present invention disables driving directions from being provided to a vehicle operator in special situations such as the vehicle or telematics radio being stolen or reported missing. Accordingly, the present invention prevents unauthorized access from a telematics radio of driving directions to the vehicle owner's home or other pre-selected destinations.
